Training Update

Not intended for press or for reporting purposes.

SOUTH DAKOTA DEPARTMENT OF HEALTH

CDC has updated its COVID-19 clinical considerations:

www.cdc.gov/vaccines/covid-19/info-by-product/clinical-considerations.html.

**Slides and information also available on DOH COVID-19 website*

Not intended for press or for reporting purposes.

SOUTH DAKOTA DEPARTMENT OF HEALTH

Updated recommendations on intervals between the first and second dose

- Doses earlier than grace period should not be repeated.
 - *Doses should be administered as close to the recommended interval as possible.*
 - *However, if it is not feasible - Pfizer-BioNTech and Moderna may be scheduled for up to 6 weeks (42 days) after the first dose.*

If the second dose is administered beyond these intervals, there is no need to restart the series.

Updated recommendations on interchangeability of vaccine products

- mRNA COVID-19 vaccines are not interchangeable

Not intended for press or for reporting purposes.

SOUTH DAKOTA DEPARTMENT OF HEALTH

Strategies to ensure patients receive appropriate second dose - product and interval:

- Providing cards to vaccine recipients
 - bring back card to 2nd appointment
 - encourage a backup copy (i.e. photo)
- Recording in SDIIS (and EMR if not linked.)
- Encouraging enrollment in V-Safe
- Appointments for the second dose before the vaccine recipient leaves

Make every effort to determine first dose vaccine product

In exceptional situations in which the first-dose vaccine product cannot be determined or is no longer available, ---- any available mRNA COVID-19 vaccine may be administered at a minimal interval of 28 days between doses to complete the mRNA COVID-19 vaccination series.

Not intended for press or for reporting purposes.

SOUTH DAKOTA DEPARTMENT OF HEALTH

Make every effort to determine first dose vaccine product – cont.

If two doses of different mRNA COVID-19 vaccine products are administered in these situations (or inadvertently), no additional doses of either product are recommended at this time.

Not intended for press or for reporting purposes.

SOUTH DAKOTA DEPARTMENT OF HEALTH

Updated language on vaccination of persons with a history of SARS-CoV-2 infection

- Trials indicate vaccines safely given to persons with evidence of a prior SARS-CoV-2 infection
- Viral or serologic testing for SARS-CoV-2 infection for vaccine decision-making is not recommended
- No recommended minimum interval between infection and vaccination,
 - Risk of reinfection is low in the months after initial infection
 - Risk may increase with time due to waning immunity.
 - **While vaccine supply remains limited**, may choose to temporarily delay vaccination, if desired

Additional resources on vaccine excipients (Appendix B)

[CDC's vaccine excipient summary](#)

In Process.....

- Updated documents including;
 - standing orders,
 - pre-vaccination screening form,
 - administration guidance.
